

IV to oral switch

Think ACED

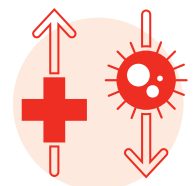

A

Afebrile for more than 24 hours (i.e. haemodynamically stable with no signs of fever)

C

Clinically improving: improving signs and symptoms of infection and inflammatory markers trending down towards normal

E

Eating and drinking: they have a functional GI tract with no malabsorption and there are no interactions with other medications

D

Not suffering from certain deep-seated / high-risk infections such as bloodstream infection, empyema, endocarditis, meningitis, osteomyelitis, severe or necrotising soft tissue infections, septic arthritis and undrained abscess.
